

According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is 0579-0036. The time required to complete this information collection is estimated to average 2 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

OMB APPROVED  
0579-0036  
Exp.: 10/31/2018

This report is required by law (7 U.S.C. 2143). Failure to report according to the regulations can result in an order to cease and desist and to be subject to penalties as provided for in Section 2150.

NEW YORK NEW YORK, NY 10065

3. REPORTING FACILITY (List all locations where animals were housed or used in actual research, testing, teaching, or experimentation, or held for these purposes. Attach additional sheets, if necessary.)

FACILITY LOCATIONS (Sites)

(b)(7)(F)

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets, if necessary, or use APHIS FORM 7023A.)

A.  Animals Covered By The Animal Welfare Regulations	B.  Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C.  Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D.  Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E.  Number of animals upon which teaching, experiments, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress on these animals and the reasons such drugs were not used must be attached to this report.)	F.  TOTAL NUMBER OF ANIMALS  (Cols. C + D + E)
4. Dogs	0	0	0	0	0
5. Cats	0	0	0	0	0
6. Guinea Pigs	0	0	0	0	0
7. Hamsters	0	0	0	0	0
8. Rabbits	0	0	0	0	0
9. Non-human Primates	0	0	0	0	0
10. Sheep	0	0	0	0	0
11. Pigs	0	0	0	0	0
12. Other Farm Animals					
13. Other Animals					

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

Column E explanation

1. **Registration Number- 21-R-0119**
2. **Number of animals used in this study- 3**
3. **Species (common name) of animals used in this study- Mammal Deer**
4. **Explain the procedure producing pain and distress.**

Female deer residing on the Cornell University campus undergo permanent sterilization surgery as part of a fertility control research project. This species, due to excess population growth causes increased potential for deer/vehicle accidents, and destruction of valued and diverse botanical collections and agricultural research plots. Deer are captured and transported to the University Veterinary hospital for sterilization surgery. Buprenorphine-sustained release or Banamine® is administered for intra-and post-operative analgesia. After surgery, deer are tagged and fitted with radio transmitter collars and transported, while still under anesthesia, back to their original capture site for release. Anesthesia is reversed in the field and deer are observed from a distance until they are able to ambulate with a coordinated gait. Capture myopathy associated with deer capture, post-operative pain, and surgical complications are potential sources of pain and /or distress. Telemetry is used to monitor deer movements for the first 48 hours after release and veterinary care is provided should there be any signs of injury, capture myopathy or poor health. Because these wild deer are least stressed in their natural home range, it would be inhumane to keep them captive to monitor their recovery. Since there are no guaranteed visual observations of recovering deer past the time they can walk away on their own at the release site, the IACUC has determined that these deer should be considered in the pain category E.

**Provide a scientific justification why pain/and or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results.**

Wild deer are most at ease in their natural home range. Therefore, minimizing the invasive nature of the surgery performed, and keeping them sedated until they are returned to the trap site to recover is the most humane way of dealing with post-surgery discomfort. Buprenorphine-sustained release or Banamine® is administered at the time of surgery for intra-and post-operative analgesia. Once released, telemetry is used to monitor deer movements for the first 48 hours after release. Any released deer showing signs of injury, capture myopathy or poor health, are recaptured, if possible, and provided with veterinary care, if necessary. All efforts are made to minimize capture-associated stressors: trained staff, efficient timing, application of blindfolds and rope hobbles, and prompt use of immobilizing drugs. Traps and nets are monitored continually and personnel handle captured animals immediately in order to minimize time in traps. Animals are handled as quickly and quietly as possible to minimize the amount of time the deer are restrained without being sedated. This is critical for minimizing the potential for capture myopathy. The investigator's experience over 6 years has demonstrated a low post-capture mortality rate of 2.8%. Usually deer that die post-capture have unrecognizable complications (e.g., heart anomalies, *Clostridium* infections, ingested sticks, etc.) that are determined upon necropsy.

Literature searches conducted identified alternative fertility control methods (e.g., immunocontraceptive vaccines, steroid implants) but the success rates for these other methods are inconsistent and unreliable. Alternatives to surgical fertility control methods include pharmaceutical therapies, mainly immunocontraceptive vaccines (PZP and anti-GnRH vaccines). In a captive herd of marked deer, Curtis et al. (2002) reported 11% and 13% of the deer vaccinated with PZP and anti-GnRH respectively, produced fawns. Contraceptive vaccines require annual booster shots and animal stress. Curtis et al. 2002 showed that 28% of female deer treated with IC vaccines were fertile if one booster dose was missed. If boosters were missed during two consecutive years, 57% of treated deer produced fawns. MacLean et al. (2006), have concluded that surgery is the only proven means of permanently sterilizing deer.

## “Column E Explanations” - 2013 USDA Annual Report

Registration Number: 21-R-0124

Customer ID: # 400

Species: silver-haired bat

Number of Animals: 30

Explanation of procedure(s) producing pain and/or distress: Bats collected from the wild by the investigator (investigator possesses all necessary federal & state permits) are infected with one of three different rabies virus (r.v.) strains (after animal quarantine and verification bats do not already carry the rabies virus) in studies aimed at understanding (a) the susceptibility of bats to r.v. strains that are more frequently found in other bat species (thus, addressing if bats can pass along different virus strains as “heterologous hosts”); and (b) the effect of hibernation on bats getting rabies if they are infected with r.v. prior to hibernation. To address this second scientific aim, the investigator uses an artificial hibernaculum equipped with a remote internal camera to allow animal viewing 24 hrs/7 days per week, and also uses an infrared thermometer for measuring & monitoring internal body temperatures of bats in torpor.

Thus, bats are intentionally infected with known doses and strains of r.v., and it is recognized that they could become ill after virus inoculation. It is possible that inoculated bats will remain asymptomatic for rabies (this has been observed in the lab). The severity of rabies symptoms varies, based upon virus dose and the effectiveness of an animal’s immune system to fight infection. Regardless of the study being conducted, animals that have been inoculated with r.v. will be monitored twice a day, seven days a week. Because early signs of rabies are frequently difficult to verify, it is necessary to closely watch animals during the incubation period where clinical disease is expected - 7 to 45 days post inoculation. At the first clinical signs of rabies, animals are watched every three hours during the day (8:00 & 11:00 AM; 2:00 & 5:00 PM), and once during the evening (8-10:00 PM). Bats are euthanized once signs of rabies are indisputable. In the past year, all animals involved in this study that exhibited symptoms of rabies were euthanized prior to death caused by the disease.

Scientific justification for why pain and/or distress could not be relieved: Since the researchers are in effect studying a bat’s immune response to an administered virus dose, they do not want to confound data from the study by introducing drugs - even if doing so might reduce the symptoms thought to be caused by viral inoculation. This would ultimately waste animals if the use of pain alleviating drugs were to bias the study’s outcome by inadvertently also affecting the animals’ immune reaction. Allowing the animals’ immune system to react to the presence of virus without the influence of any delivered drugs was a key element of the study to understand how bat hosts can transmit the disease.

### Column E Explanation

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 21 - R - 0173
2. Number 42 total / 13 category E of animals used in this study.
3. Species (common name) Canine of animals used in the study.
4. Explain the procedure producing pain and/or distress.

*Young dogs were infected with various strains and concentrations of Bordetella bronchiseptica and clinical signs of the illness were allowed to develop.*

5. Provide a scientific justification why pain and or distress could not be relieve. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)

Dogs were allowed to develop the clinical signs of the illness to evaluate the potential of each strain and concentration of *Bordetella bronchiseptica* as a challenge model for vaccine efficacy studies. However, the frequency of monitoring and Veterinarian involvement would have increased, if clinical signs indicated severe pain and/or distress.

Clinical signs of *Bordetella bronchiseptica* were scored over a 21 day period, and that data statistically analyzed to identify potential challenge models. Relief of the pain and/or distress during the 21 day period would have altered the data being collected and interfered with the determination of potential challenge models.

6. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specified section number (e.g., AHPIS, 9 CFR 113.102):

**Column E Explanation**

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 21-R-0173
2. Number 5 on study (5 category E) of animals used in this study.
3. Species (common name) canine of animals used in the study.
4. Explain the procedure producing pain and/or distress.

Animals were challenged with a virulent canine parvovirus and exhibited progressive gastrointestinal signs.

5. Provide a scientific justification why pain and or distress could not be relieve. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)

As per CFR 113.317, clinical disease must be allowed to prove pathology of the challenge dose to confirm the virulence of the challenge material. Effective pain relieving agents would mask clinical signs. Animals were monitored at least twice daily including weekends and holidays. If it was suspected that symptoms may become severe after normal working hours, technicians were on site after hours for monitoring purposes. If any animal's condition prolonged or failed to improve, veterinary intervention was escalated.

6. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specified section number (e.g., AHPIS, 9 CFR 113.102):

**Column E Explanation**

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 21 - R - 0173
2. Number 24 enrolled on study (7 Category E) of animals used in this study.
3. Species (common name) canine of animals used in the study.
4. Explain the procedure producing pain and/or distress.

Animals were challenged with a virulent canine parvovirus, all 6 control animals and 1 vaccinated animal exhibited progressive gastrointestinal signs.

5. Provide a scientific justification why pain and or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)

9 CFR Part 113.317 outlines requirements to license a product such as that being tested in this study. Clinical disease must be allowed to prove pathology of the challenge dose and in turn effectiveness of the parvo component. Effective pain relieving agents would mask clinical signs. Animals were monitored at least twice daily including weekends and holidays. If it was suspected that symptoms may become severe after normal working hours, technicians were on site after hours for monitoring purposes. If any animal's condition prolonged or failed to improve, veterinary intervention was escalated.

6. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specified section number. (e.g., APHIS, 9 CFR 113.102):

DEC 10 2013

FEB 18 2014

Annual Report Addendum, 10/1/2012 to 9/30/2013, Facility No. 21-R-0209  
Category E Explanation-Guinea Pigs

Guinea Pig Sensitization Tests determine the allergenicity of materials. The maximization test and the patch test are required by the FDA Modified ISO 10993-1 matrix for preclinical evaluations of Class II and III medical devices. During the maximization test, an adjuvant and extract are injected intradermally. The adjuvant enhances the immune response and results in lesion formation at the injection site. These lesions, ranging in size from 3mm to 20mm, are not treated due to the possible interference or enhancement of the sensitization response. In order to determine the health status of these animals, daily observations are performed and animal health technical personnel evaluate the sites. Any abnormal findings are reported to the Attending Veterinarian for assessment. The positive controls for the patch test result in minimal to moderate hive formation during the challenge phase. As is the case with the maximization test, any abnormal findings are reported to the Attending Veterinarian for assessment. Over the duration of the year none of the 1627\* guinea pigs used in these evaluations (defined as Category E) required additional veterinary care for problems related to the lesions.

\*987 IN transcription error 2/1/14

In order to address pain and distress, the Attending Veterinarian researched analgesics and an appropriate oral medication which would not affect the animals' fluid intake was not available. The nature of the Sensitization Tests negates the use of topical analgesia. We also performed weight trends and the animals exhibited weight gain throughout the test procedures. The animals ambulated normally and only vocalized when handled (as is the case with untreated guinea pigs).

**Column E Explanation**

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 21-R-0043

2. Number 39 of animals used in this study.

3. Species (common name) Chinchilla of animals used in the study.

4. Explain the procedure producing pain and/or distress.

During acute noise exposures, each animal is completely restrained in a specially designed holder (Hargett, 1986) to prevent head and body movement which ensures the correct angle of incidence of the acoustic wave front to the animal's ear canal. The maximum duration of restraint for each animal in the acute exposures is less than two hours. Animals are not restrained during chronic exposures (6 to 24 hours per day) and are housed in standard animal cages (12.5" W x 16" L x 12.5" H) within the exposure room with food and water freely available.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see Item 6 below)

After thorough and continued review, the IACUC states that during the actual experimentation the animals are not administered anesthetic, analgesic, or tranquilizing drugs as such administration would have an adverse affect on the testing procedures immediately following the experimental protocols. The noise exposures are not painful and are less severe than unprotected exposures experienced by military personnel (acute exposures) or by industrial workers (long-term exposures). Furthermore, anesthetic or analgesic agents may significantly alter the response of the middle-ear reflex system to high-level stimulation (Price, 1999).

6. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

**October 1, 2012 to September 30, 2013**

1. During the reporting period, the IACUC granted permission to house gerbils and guinea pigs in the same room in the Institute of Comparative Medicine (b) (7)(F) The conditions of the space were adjusted to allow for this housing and microisolator tops were kept on each gerbil cage. The number of animals housed as described above during the reporting period was 153 guinea pigs and 66 gerbils.
2. A total of 40 macaques were individually housed during the reporting period based either on scientific necessity as described in IACUC-approved protocols, or on veterinary discretion due to animal incompatibility. The animals were housed to allow for visual and auditory social interaction.
3. During the reporting period, a total of 15 macaques were occasionally given only limited access to water, based on scientific necessity as described in an IACUC-approved protocol. The limitation was initiated during a gradual acclimation period tailored to each animal. Animals were monitored closely (e.g. body weight, hydration, volume of water consumed, behavior) by the investigative and veterinary staff for health and well being.

IACUC Approved Exception to AWR Summary:

The IACUC approved one protocol during this period that involved water scheduling for nonhuman primates. This exception affects two *Macaca mulatta* and one *Macaca nemestrina*.

The justification for the exception is as follows:

This IACUC protocol employs standard methods used to study sensory and motor function in animals performing behavioral tasks and conforms to the guidelines set forth in the 2010 National Research Council publication *Guide for the Care and Use of Laboratory Animals* [pg. 32-33] and Van Sluyter RC et al (2003) *Guidelines for the Care and Use of Mammals in Neuroscience and Behavioral Research*. Washington, DC: National Academy Press, [pg. 209].

Addendum to 2013 ANNUAL REPORT OF RESEARCH FACILITY dated 11/16/13

RE: 21-R-0118

**SUMMARY OF APPROVED EXEMPTIONS FOR USDA COVERED SPECIES**  
**Annual Report of Animal Use for 2012-2013**

- **Protocol 1994-0020- 31 Horses-** Horses may be housed in stalls smaller than space requirements outlined in the Guide for the Care and Use of Laboratory Animals or in the Guide for the Care and Use of Agricultural Animals in Research and Teaching. Horses have visual contact with other horses and are socialized daily with people. The horses are ridden or turned out daily.
- **Protocol 2004-0053 – 418 Siberian hamsters–** This exemption is requested for the use of smaller cages than required for the most commonly used hamsters since our dwarf hamsters are significantly smaller. Males with nursing females since dwarf hamsters are compatible and can be kept in groups.
- **Protocol 2005-0143– 1 Horse –**For the post-op period, 4 weeks of complete stall rest without walking exercise will be required. Thereafter horses will be on increasing walking program. Exemption is required due to the soft and tenuous nature of the cartilage repair implant. In the target species, being man, the joint would be cast or severely braced. PI cannot do that to the horse's stifle, so limited walking is the compromise.
- **Protocol 2007-0017 – 10 Dogs –** While dogs are on study, an individual animal's viral shedding must be monitored and group housing may confound the data. Additionally, pair housing of intact males has been attempted in the past, with detrimental results due to fighting. Females are group housed while not on study. The animals have visual and olfactory contact with other dogs and human enrichment is provided.
- **Protocol 2008-0139 – 64 Naked Mole Rats –** This is an exotic species which requires special care, housing and husbandry. The exemption is made to mimic the conditions in which they live in Kenya. They never live alone and never come above ground. Their burrows are dark, warm and humid. This means housing colonies together in plexiglass tunnel systems, placing a heating pad under the nest box, cleaning toilets daily but tunnels infrequently (every 3-4 weeks) to minimize disturbance including handling, maintaining colony rooms at warm temperatures, and in silence and near darkness, and feeding a variety of fresh vegetables and fruits daily .
- **Protocol 2008-0146 – 5 Horses –**Pacemakers will be implanted in all horses. Prior to implantation, weather permitting, horses can be housed in pasture. Animals are single housed after implantation to prevent damage to the implant from other animals. Horses will have visual and olfactory contact with other horses in adjacent stalls, and will be exercised on a treadmill.
- **Protocol 2008-0158 – 4 Cats –** We are using blood for monocyte collection and would like to minimize any variation that could be due to vaccination status. For this reason, we would like the cats to remain unvaccinated. The cats will be at low risk of exposure to pathogens due to their barrier housing.
- **Protocol 2009-0032 – 4 Cats-** The study requires regular fecal collection (from both lungworm- and hookworm-infected cats) as well as the recovery of dead hookworms from feces. The cats must be individually housed so we can determine which feces corresponds to which cat. There will be increased human contact through a socialization program and additional enrichment items will be provided. Cats will have visual contact (through a window in the room) with other cats housed in nearby rooms.
- **Protocol 2009-0108 – 1 Dog-** Dogs will at times be individually housed. Research dogs will kept in individual cages during capsule endoscopy (to prevent other dogs from biting the data recorder and sensor array). Dogs will also be singly housed when fecal collection is taking place so the sample can be matched to the dog.
- **Protocol 2010-0007-15 Horses-** Pacemakers will be implanted in all horses. Prior to implantation, weather permitting, horses can be housed in pasture. Animals are single housed after implantation to prevent damage to the implant from other animals. Horses will have visual and olfactory contact with other horses in adjacent stalls, and will be exercised on a treadmill.
- **Protocol 2010-0008- 20 Swine-** Piglets will be housed in cages with floor area of 7.1 ft<sup>2</sup>/per animal, compared to the Guide specification of 8 ft<sup>2</sup>/animal. The animals in this study will be less than 22 days of age, when they will be about 7.5 kg, or about 50% the maximum size piglet for the 8 square foot cage. Given the size of the piglets and the amount of space available for them to move around, the veterinary staff does not anticipate any stress to the animals from the slightly smaller cage sizes.

- **Protocol 2011-0027- 2 Horses-** Horses are exempted from exercise for the initial 2 weeks after surgery for the surgical osteoarthritis (OA) model. This allows the incision sites to heal. Horses are also exempted from exercise for 5-7 days after intra-articular injection of stem cells. Horses will still be walked in hand for 5-15 minutes daily but will not get free paddock turnout for these 5-7 days. In horses with synoviocentesis and intra-articular injection, this allows the inflammation from synoviocentesis to resolve prior to exercise and is routine in clinical practice. All horses on stall rest will receive daily grooming and socialization in the stall with staff.
- **Protocol 2012-0097- 12 Horses-** Horses are exempted from exercise for 5-7 days after intra-articular injection of vector. Horses will still be walked in hand for 5-15 minutes daily but will not get free paddock turnout for 5-7 days. This allows for minimization of synovitis due to synoviocentesis and vector injection. Also horses are exempted from exercise for the initial 2 weeks after surgery for the surgical osteoarthritis (OA) model. This allows the incision sites to heal. All horses on stall rest will receive daily grooming and socialization in the stall with staff.
- **Protocol 2012-0137- 5 Dogs-** Dogs will be individually housed post-pacemaker implantation so that pacemakers are not displaced during interactions with other dogs. Dogs will be socialized daily with humans.
- **Protocol 2013-0028- 7 Horses-** Horses will be exempted from exercise for 14 days after intra-articular injection of vector. This allows for minimization of synovitis due to synoviocentesis and vector injection and for the inflammation from synoviocentesis to resolve prior to exercise. This is routine in clinical practice. Horses will still be walked in hand for 20 minutes twice daily but will not get free paddock turnout for these 14 days. All horses on stall rest will receive daily grooming and socialization in the stall with staff.

Certificate No.: 21-R-0196

*A summary of IACUC Approved Exceptions to the Regulations and Standards*

1. Two protocols were approved for controlled water access to be used as a positive reinforcement tool for non-human primates involved in a cognitive neuroscience behavioral study. IACUC approval was based on a scientific justification. (Four Rhesus macaques)
